

RuralDR-XAI: Diabetic Retinopathy Screening Report

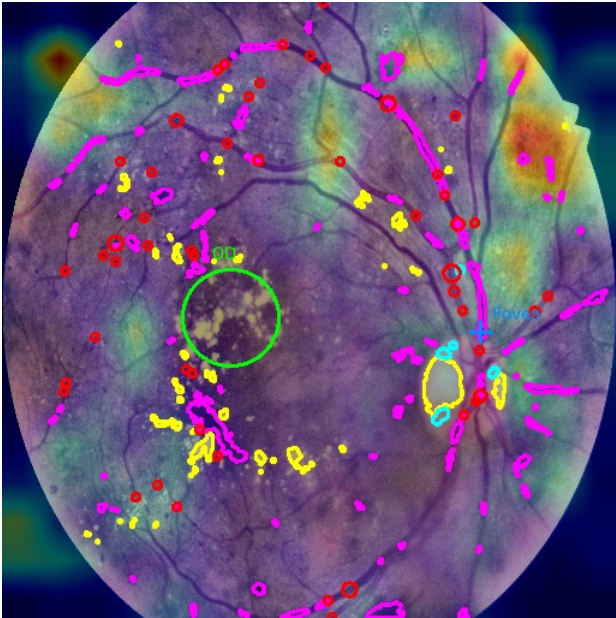

Smart India Hackathon 2026 — Explainable Retinal Screening Decision Support

Case Identifier: IDRiD_001	Date/Time: 2026-09-02T23:01:03.720834
Image Quality: GRADEABLE (Score: 0.84)	Review Priority: URGENT

1. Automated AI Triage & Disease Severity

Predicted ICDR Grade:	Level 1 — Mild Non-Proliferative DR
Referable DR Status:	NON-REFERABLE (Level 0/1)
Calibrated Confidence:	24.0% (Temperature scaled, T=1.25)
Clinical Triage Action:	URGENT REFERRAL: Clinically Significant Macular Edema risk (Hard exudates near fovea).

2. Annotated Retinal Findings & Evidence Overlays

- Microaneurysms: 51 detected (Red dots)
 - Hard Exudates: 1.20% retinal surface (Yellow contours)
 - Soft Exudates (Cotton Wool): Detected (Cyan)
 - Hemorrhages: 86 lesions (Magenta contours)
 - Macular / Foveal Threat: **WARNING: Exudates within 1 DD of Fovea**
 - Vessel Density: 3.5% of retinal field
- Evidence Consistency: PARTIALLY_SUPPORTED
Concordance Index: 0.06
Pointing Game Hit: YES

Ophthalmologist Review & Sign-Off:	Clinical Action: ☐ Approved ☐ Grade Modified ☐ Re-scan
Doctor Name / Registration: _____	Signature / Date: _____

RuralDR-XAI is an investigational decision-support tool for rural screening triage. Findings must be validated by a registered ophthalmologist before clinical intervention.
