

RuralDR-XAI: Diabetic Retinopathy Screening Report

Smart India Hackathon 2026 — Explainable Retinal Screening Decision Support

Case Identifier: sample_fundus	Date/Time: 2026-08-30T14:02:43.590846
Image Quality: GRADEABLE (Score: 0.85)	Review Priority: ROUTINE

1. Automated AI Triage & Disease Severity

Predicted ICDR Grade:	Level 0 — No Diabetic Retinopathy
Referable DR Status:	NON-REFERABLE (Level 0/1)
Calibrated Confidence:	20.9% (Temperature scaled, T=1.25)
Clinical Triage Action:	NON-REFERABLE: No signs of Diabetic Retinopathy detected. Annual routine screening.

2. Annotated Retinal Findings & Evidence Overlays

- Microaneurysms: 61 detected (Red dots)
- Hard Exudates: 0.13% retinal surface (Yellow contours)
- Soft Exudates (Cotton Wool): Detected (Cyan)
- Hemorrhages: 28 lesions (Magenta contours)
- Macular / Foveal Threat: Safe (>1 DD clearance)
- Vessel Density: 2.6% of retinal field

Evidence Consistency: REVIEW_REQUIRED
Concordance Index: 0.08
Pointing Game Hit: YES

Ophthalmologist Review & Sign-Off:	Clinical Action: ☐ Approved ☐ Grade Modified ☐ Re-scan
Doctor Name / Registration: _____	Signature / Date: _____

RuralDR-XAI is an investigational decision-support tool for rural screening triage. Findings must be validated by a registered ophthalmologist before clinical intervention.
